

LSO Vision and Roadmap

Global NaaS Event
By MEF

Pascal Menezes

MEF, Co-founder & Chief
Technology Officer

NaaS services will become fully API-driven and will require standards-based automation between ecosystem players

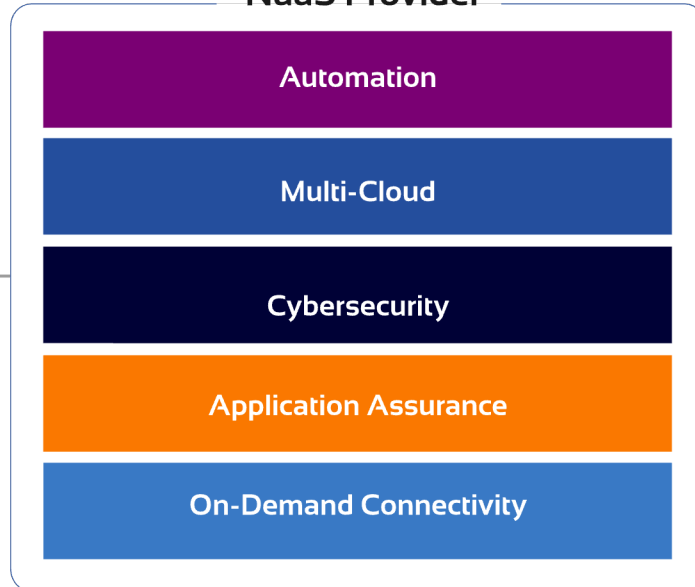

Enterprise & Application Providers

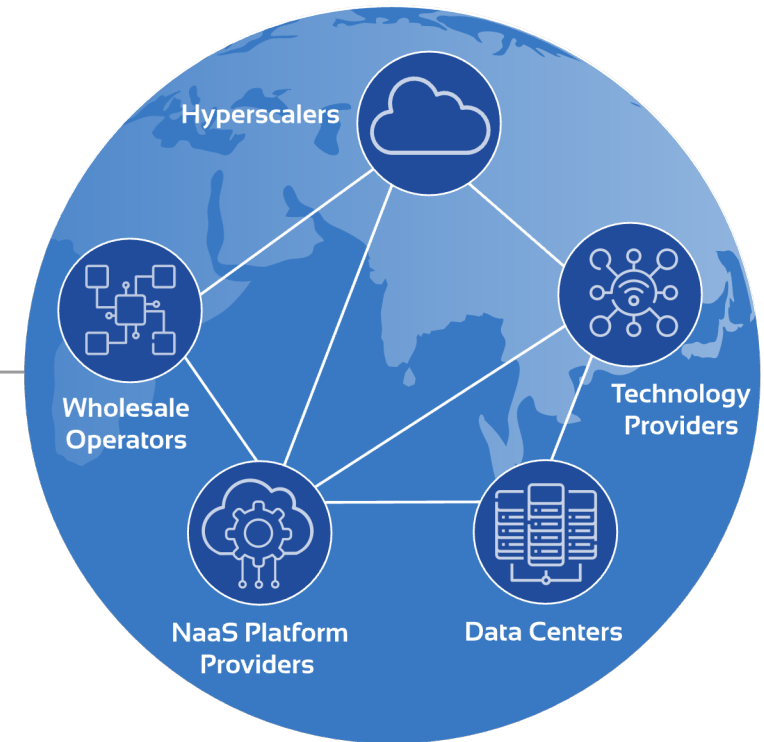

LSO Business & Operational APIs

NaaS Provider

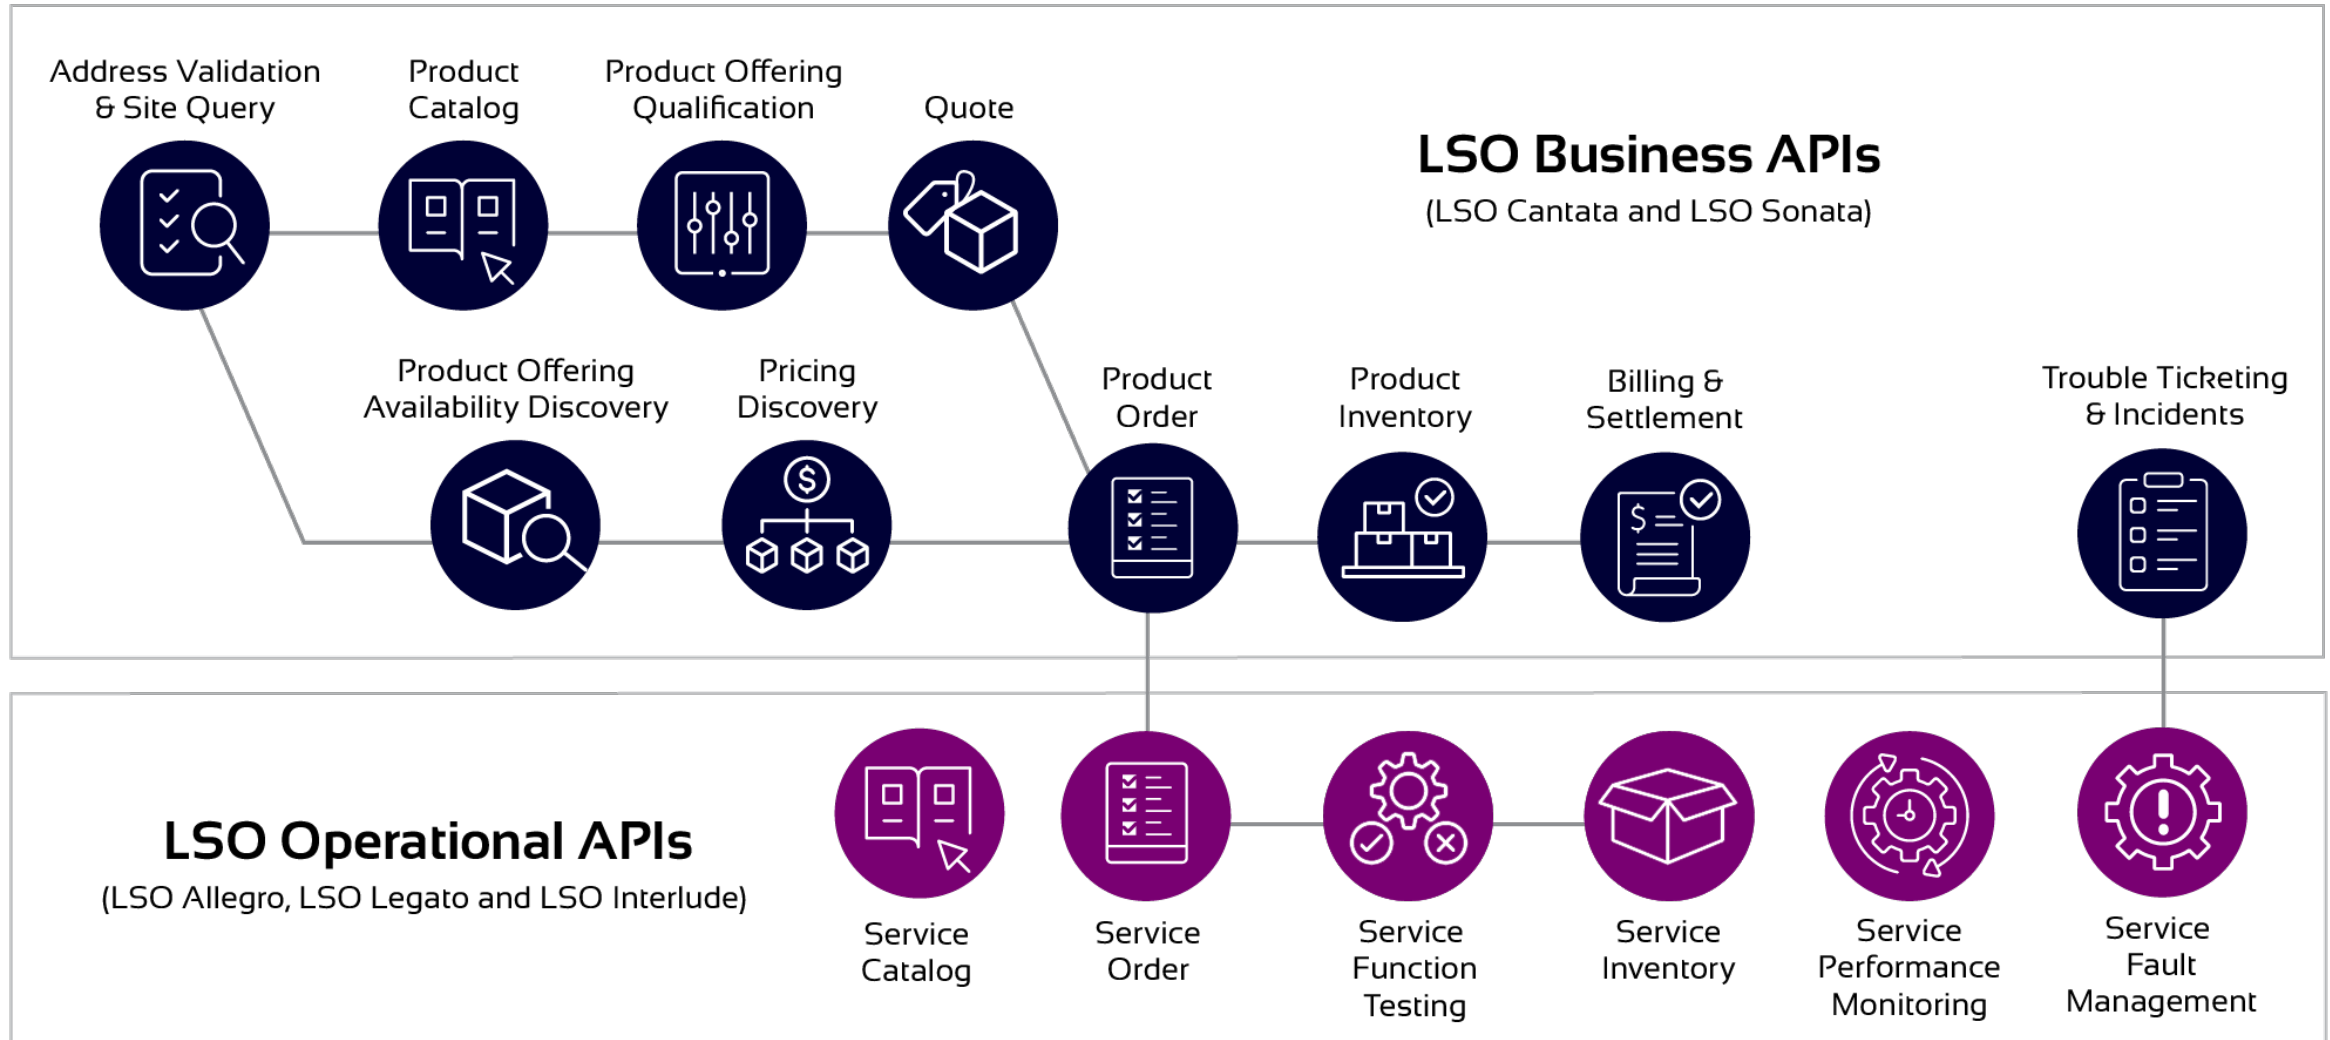

LSO Business & Operational APIs Blockchain

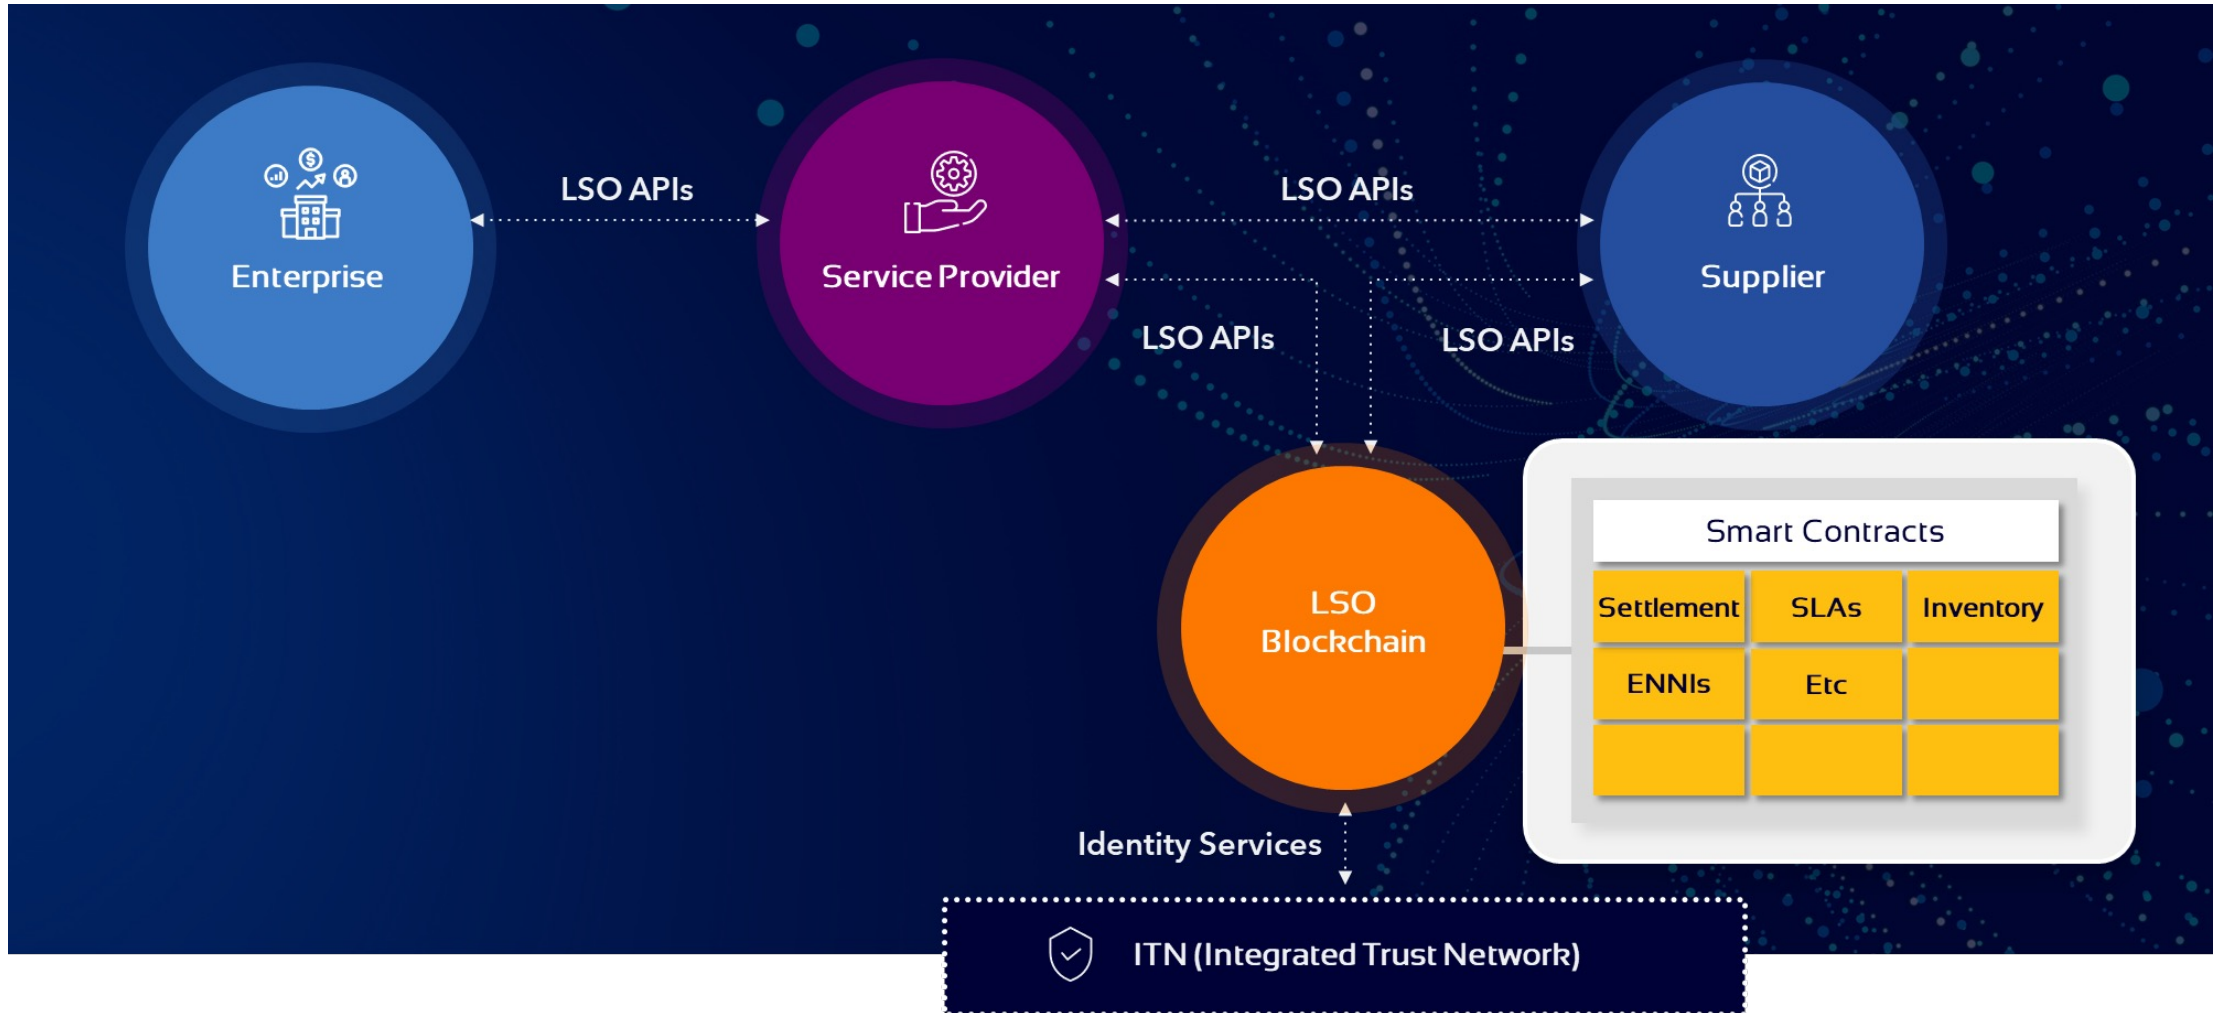

Ecosystem Partners

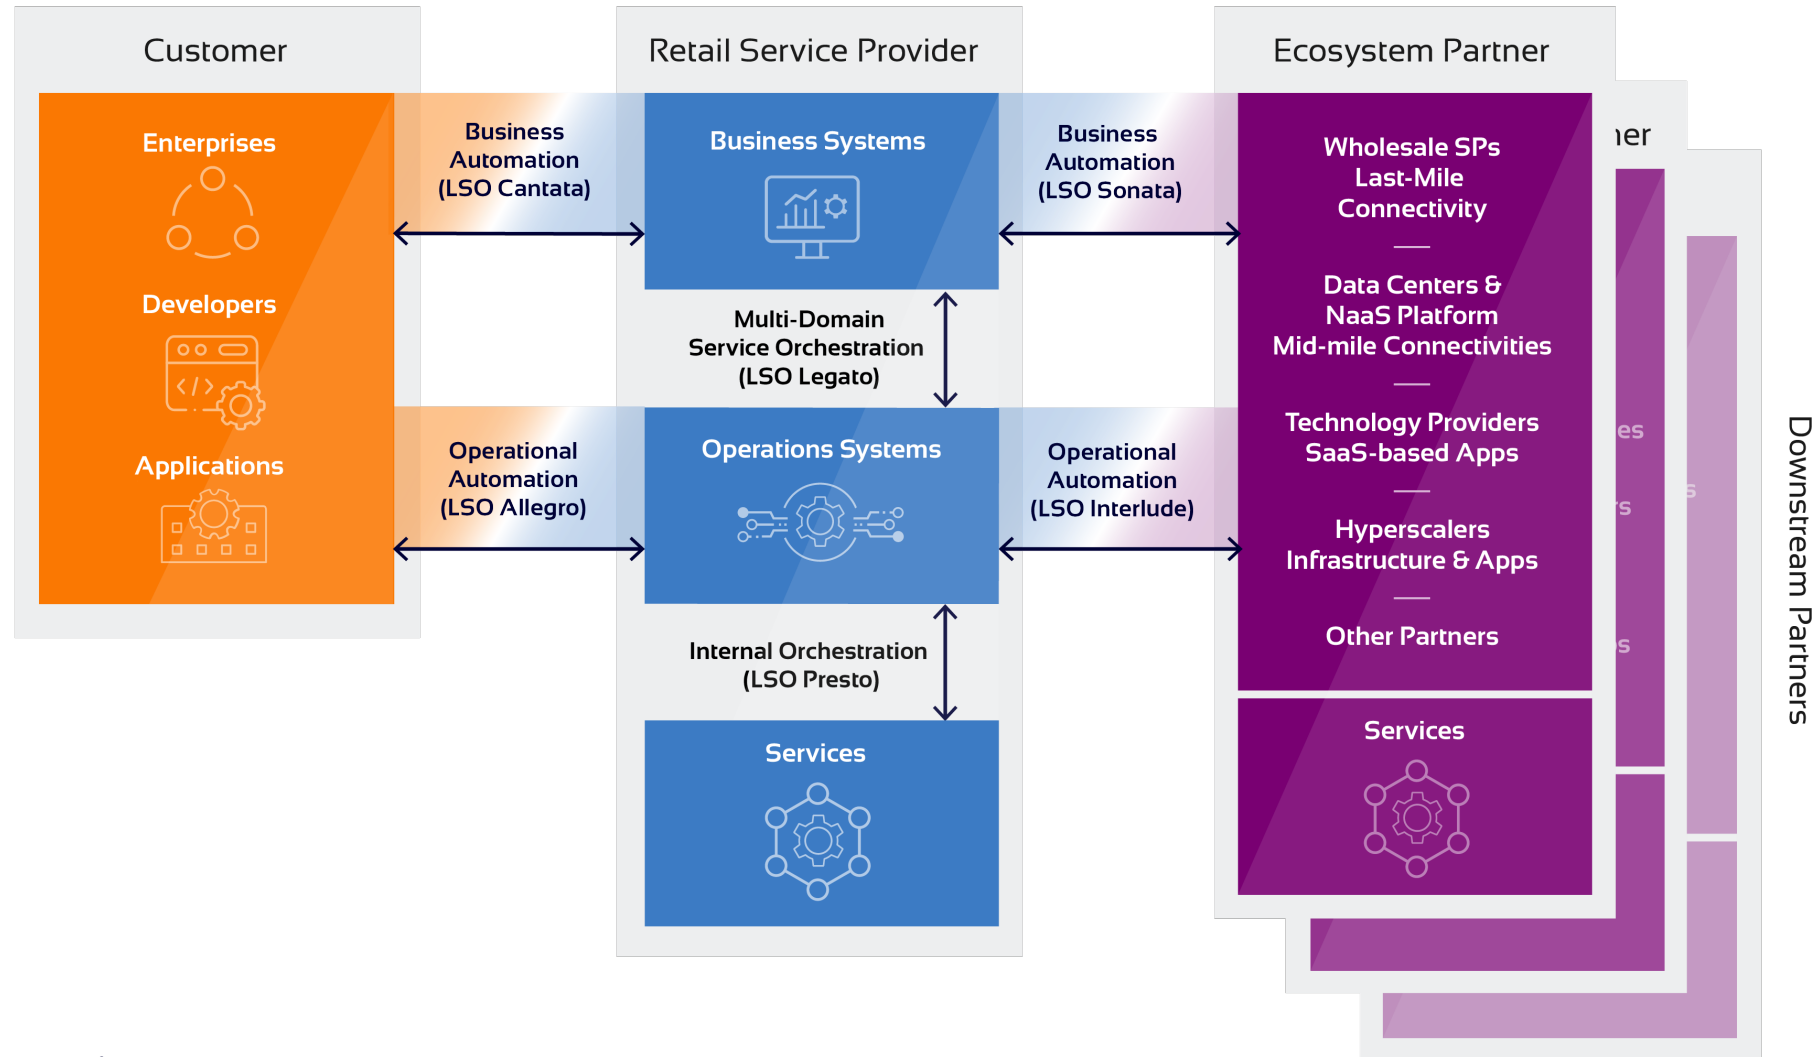

MEF has created or is in the process of creating more than 20 LSO business & operational APIs that can be used to support NaaS

MEF LSO Blockchain & smart contracts play important roles in reducing friction in billing/settlement & enabling NaaS services

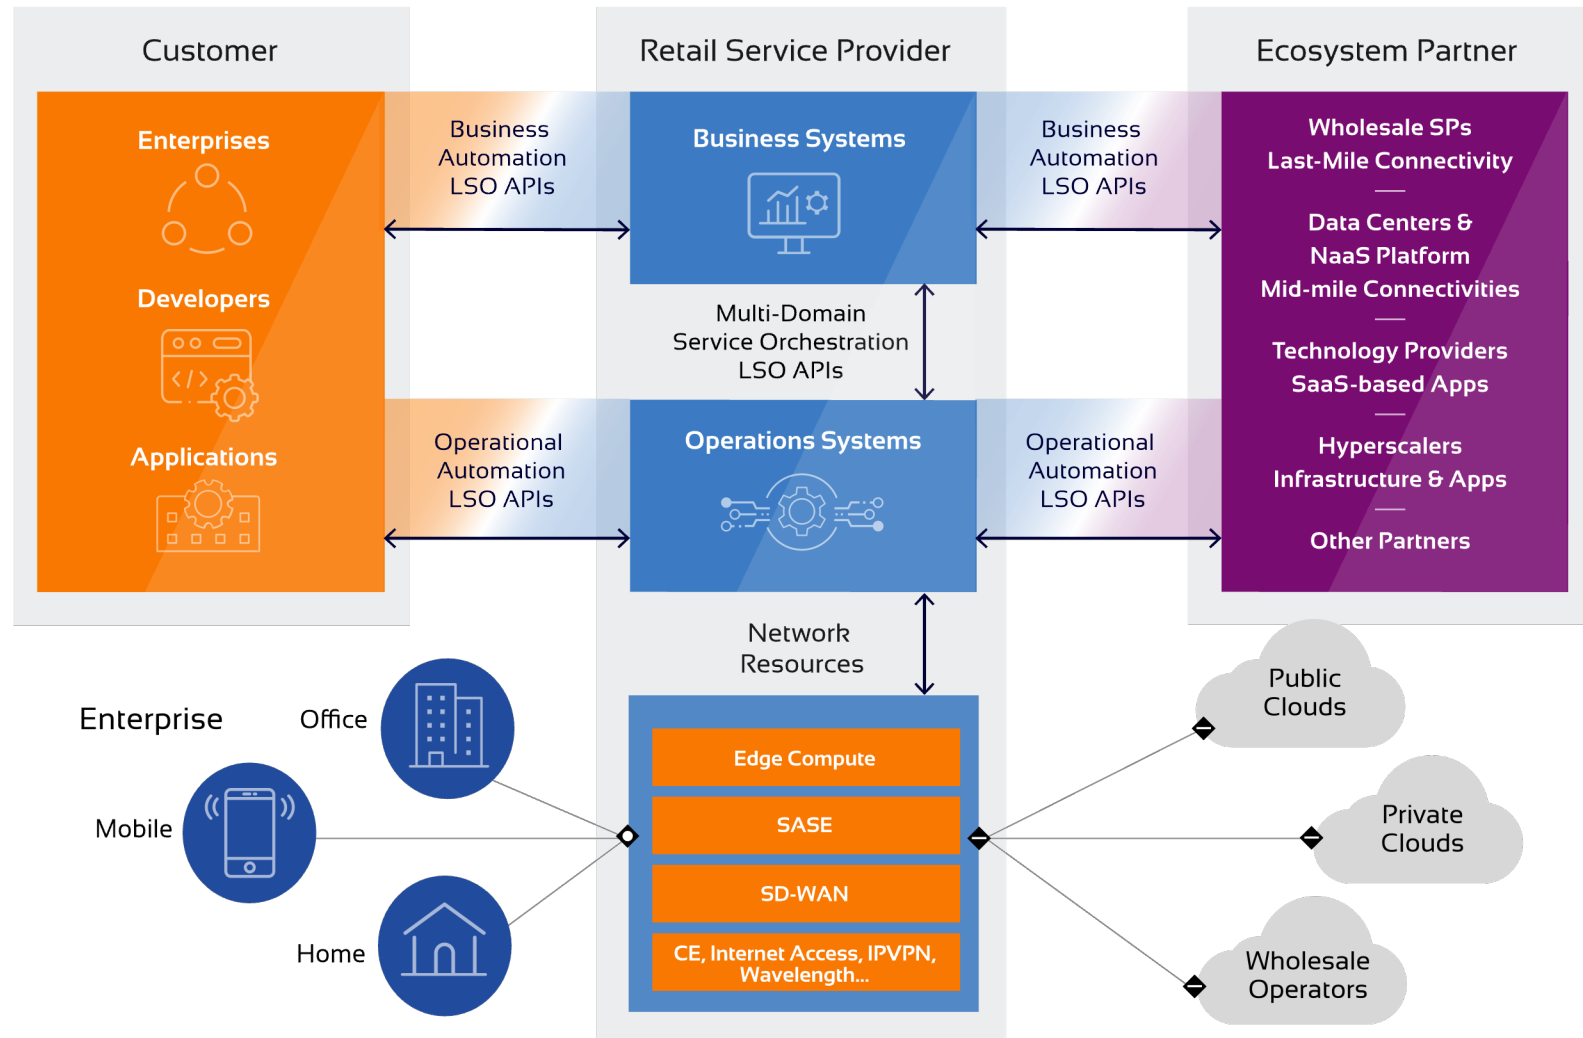

MEF's LSO Framework provides the model for automating the full lifecycle of services end-to-end across ecosystem participants

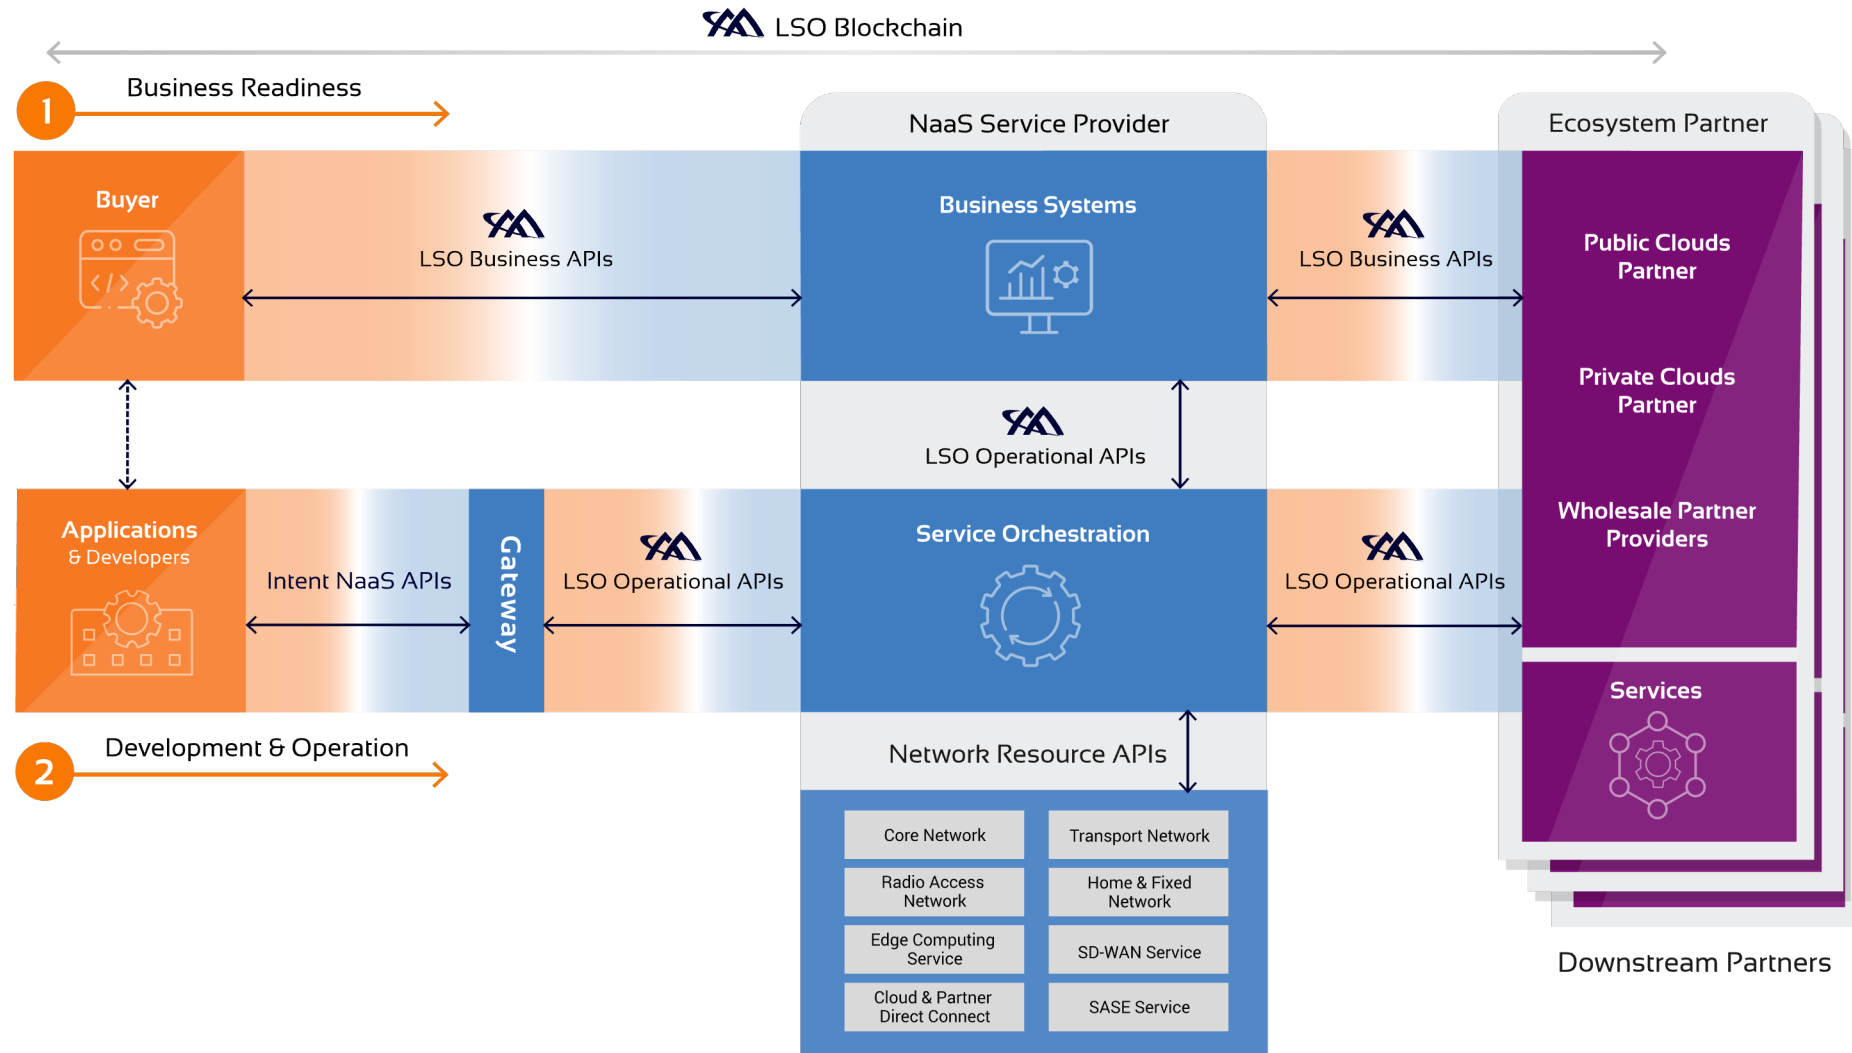

LSO = Lifecycle Service Orchestration

Use of LSO business & operational APIs throughout the supply chain facilitates an automated NaaS experience

Application developers want to be able to interact with NaaS provider networks via intent

LSO APIs can fuel NaaS growth by enabling service ordering, delivery & management across horizontally integrated networks

Ecosystem Partners

Many flavors of product & service payloads can be blended with any LSO API envelope

MEF LSO APIs build & extend upon TMF APIs to provide tightly defined business context, plug-and-play interop & extensibility

Enhance Generic TMF APIs for Higher Fidelity

- ✔ MEF standardized or plans to standardize 20+ LSO business & operational APIs, most leveraging TMF APIs
- ✔ MEF expands context definition of parameters in TMF APIs
- ✔ MEF enhances TMF APIs w/optional parameters
- ✔ Governance & alignment to TMF API Domain Context Specialization (DCS) guidelines
- ✔ MEF's polymorphic approach combines product/service-agnostic envelopes + product/service-specific payloads

MEF API Resources for Better Developer & Deployment Experience

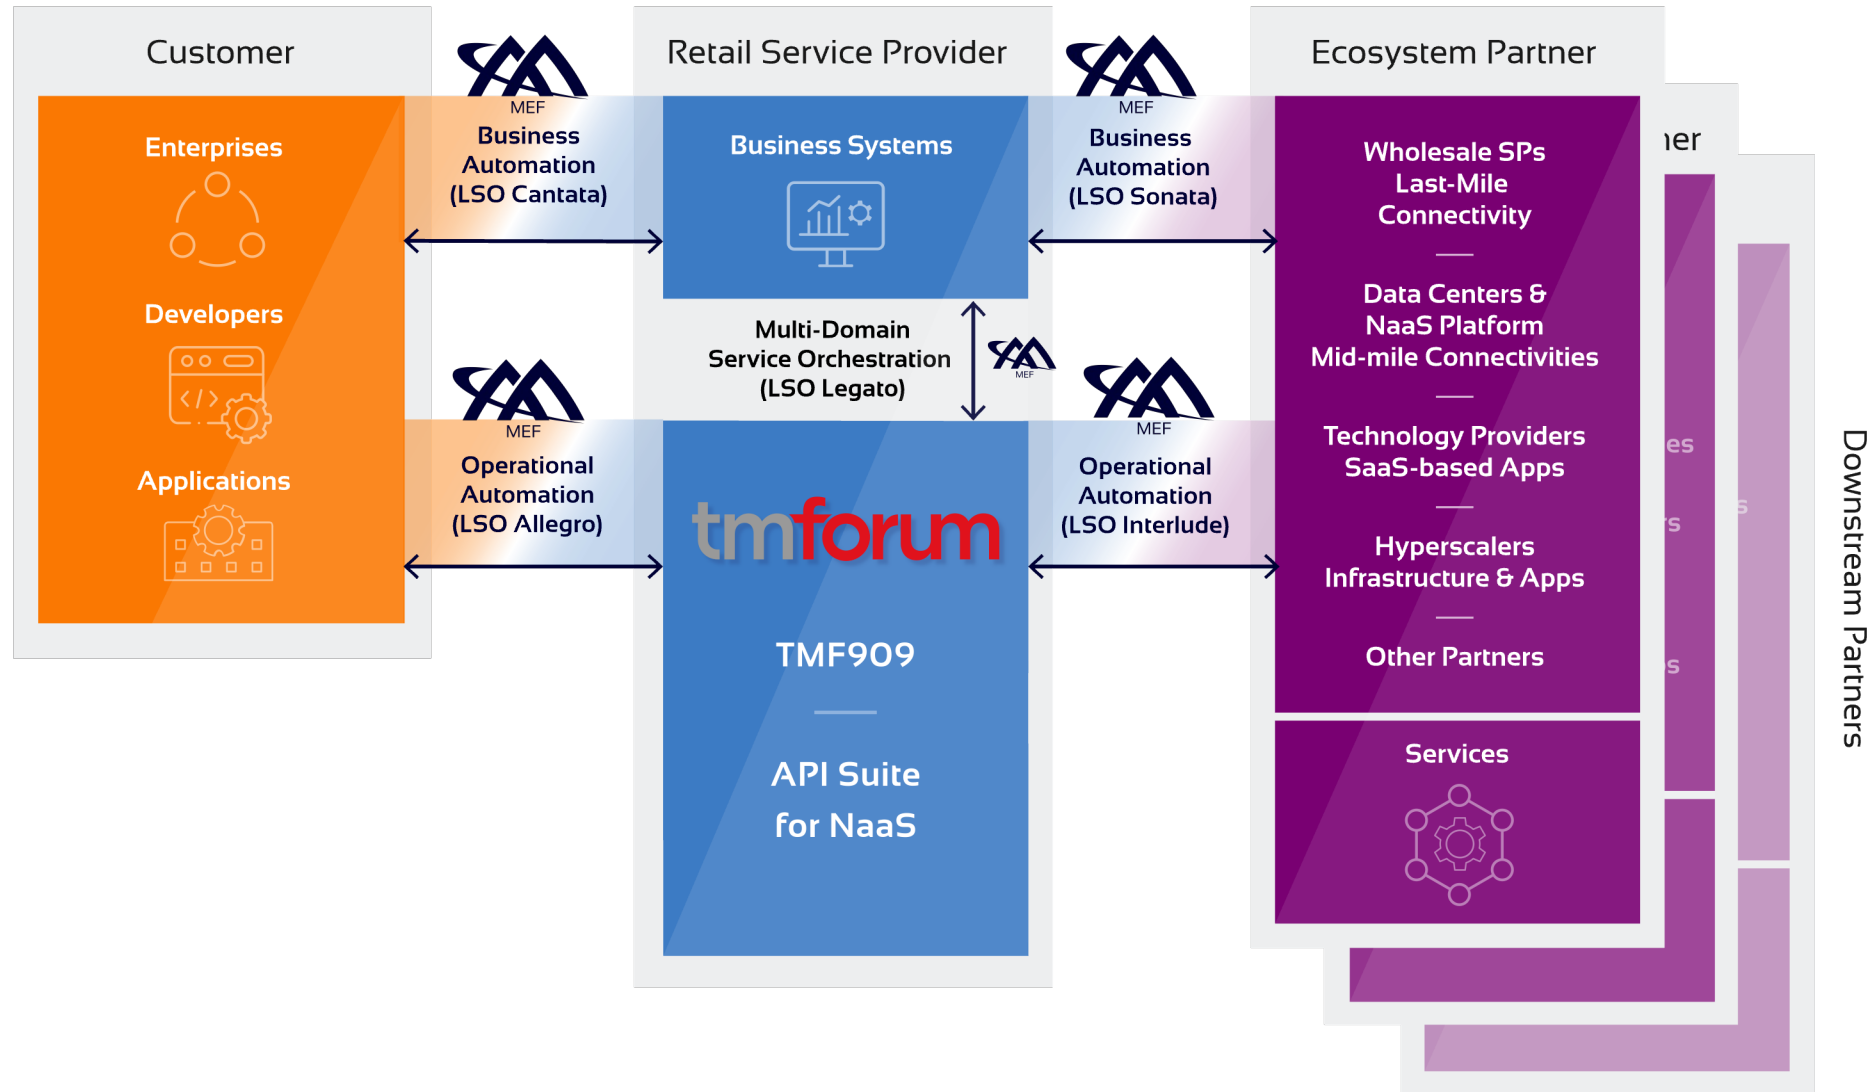

- ✔ Business Requirements and Use Case specifications
- ✔ API Developer Guides
- ✔ Static & dynamic binding approaches
- ✔ LSO Marketplace
- ✔ LSO solution providers & LSO partners
- ✔ LSO Onboard & Interop Test (OIT) Service
- ✔ Cloud-based certification
- ✔ LSO Partner Conferences/Summit
- ✔ LSO Adoption Tracker

MEF-Defined Product and Service Schemas for Full Interoperability & Extensibility

- ✔ Committed to supporting nearly 20 MEF-standardized or MEF-endorsed product and service payloads
- ✔ Extensibility to create any product and/or service using MEF guidance documentation

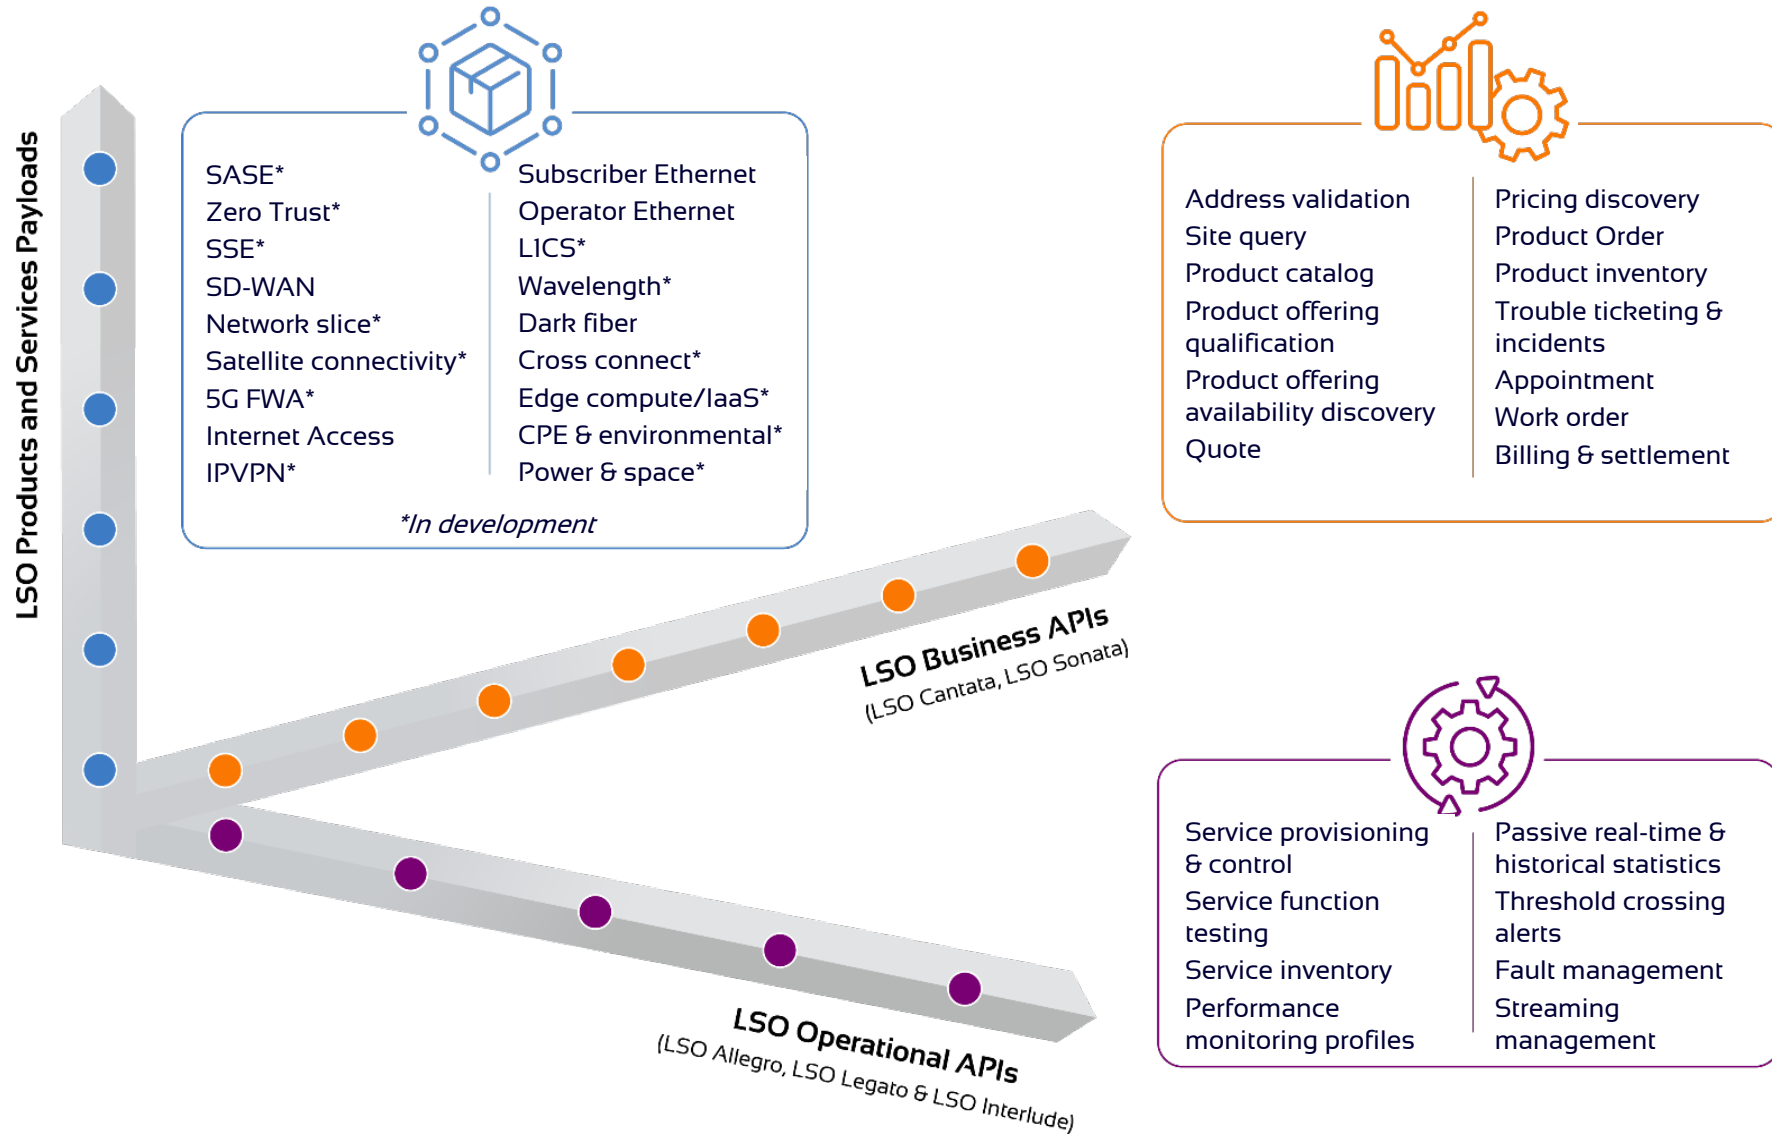

The following illustrates how TM Forum's API Suite for NaaS is aligned to the MEF LSO architecture

MEF is committed to supporting 20+ MEF standardized or MEF-endorsed product & service payloads that can be blended with LSO envelopes
