

LSO Solution Provider Use Case: LSO Ordering in the Existing Ecosystem

John Denemark

TransUnion, Senior Vice
President, Carrier Provisioning

Global NaaS Event
By MEF

TransUnion is a global insights and information company.

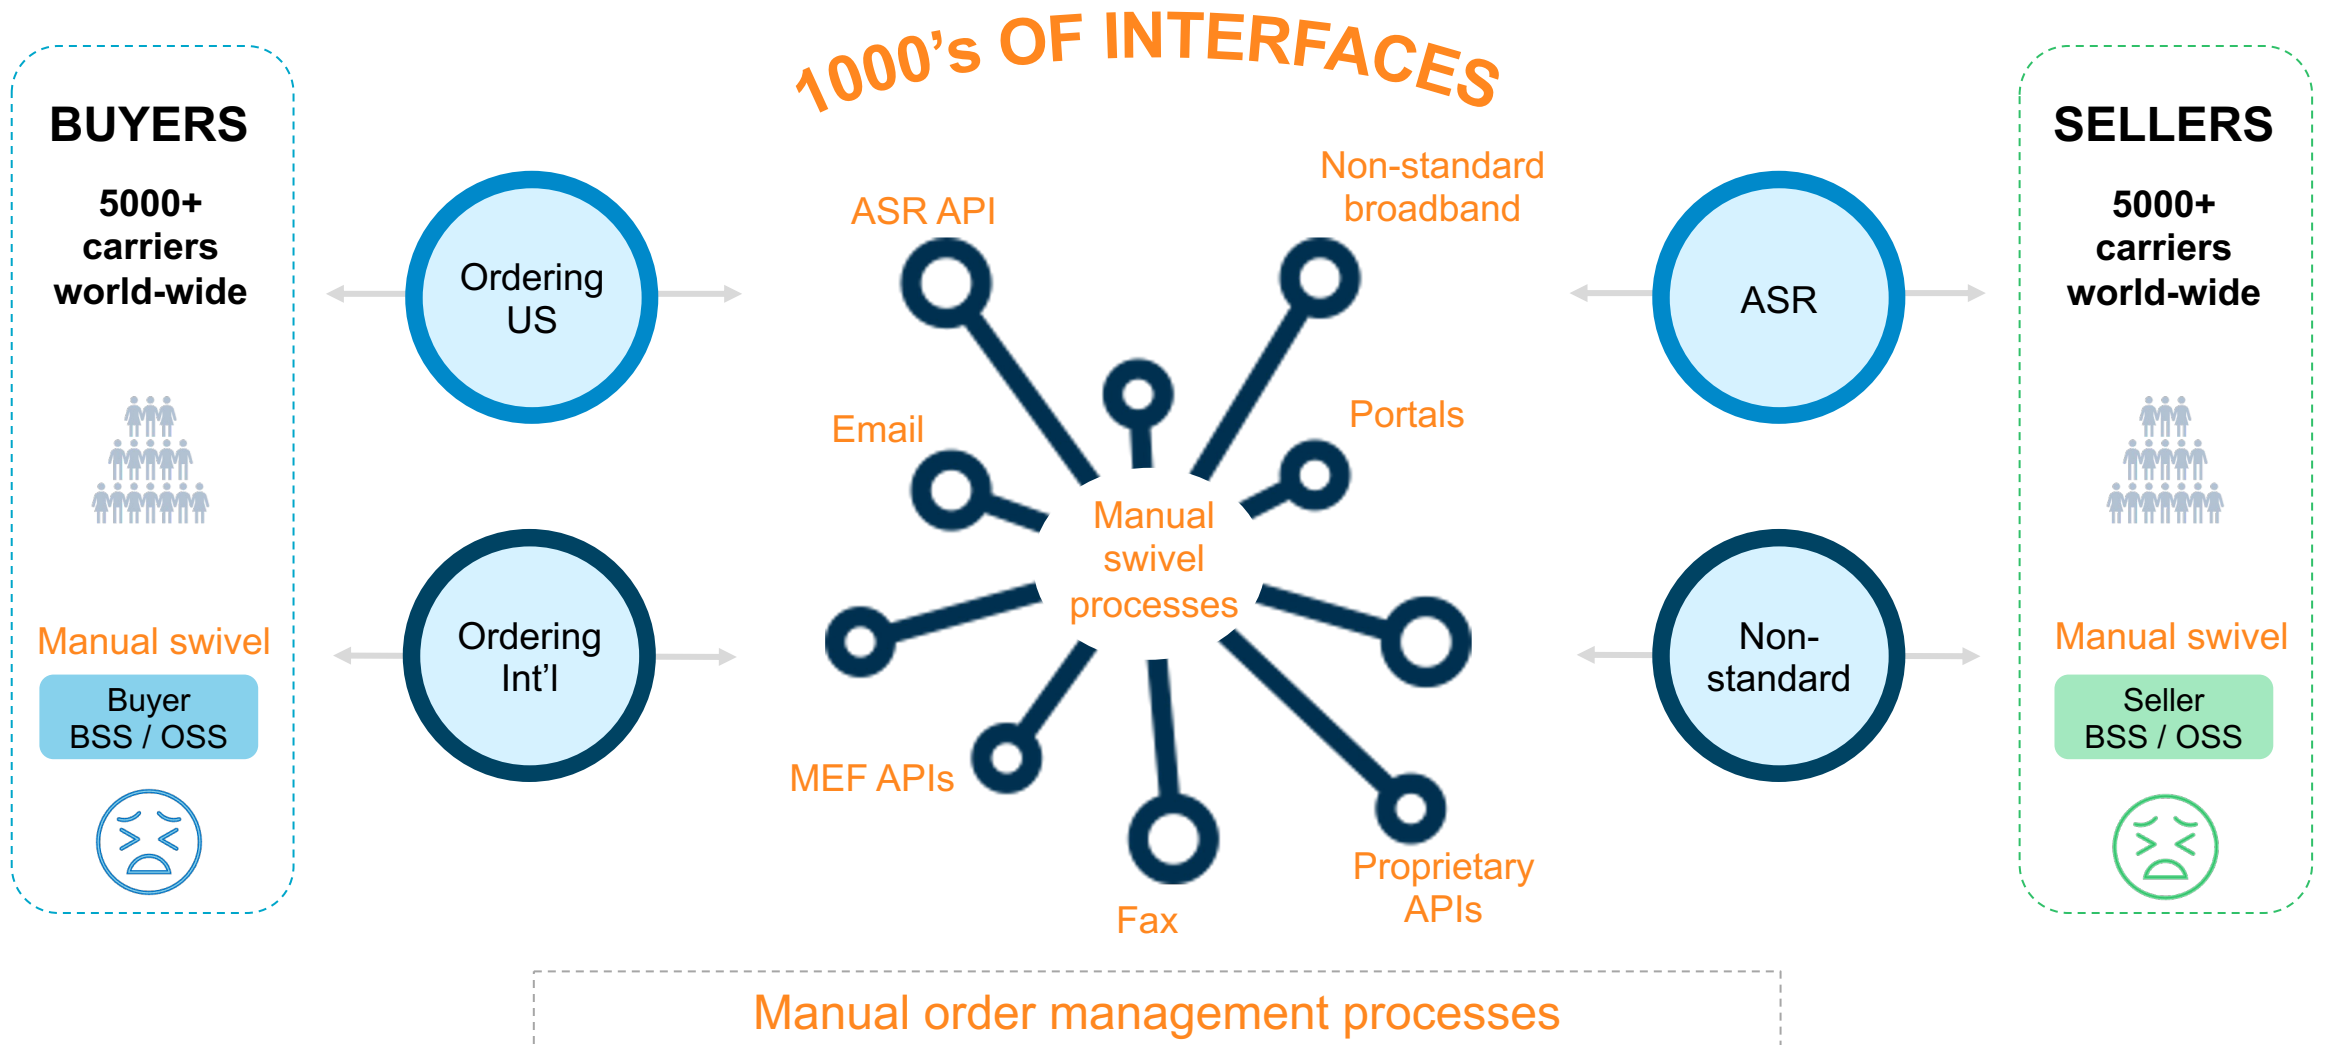

We serve all major mobile, wireline, cable, and VoIP providers through our TruContact™ product portfolio **powered by Neustar®**.

The TruContact Order Management solutions orchestrate network orders to expand and deliver communications and connectivity services.

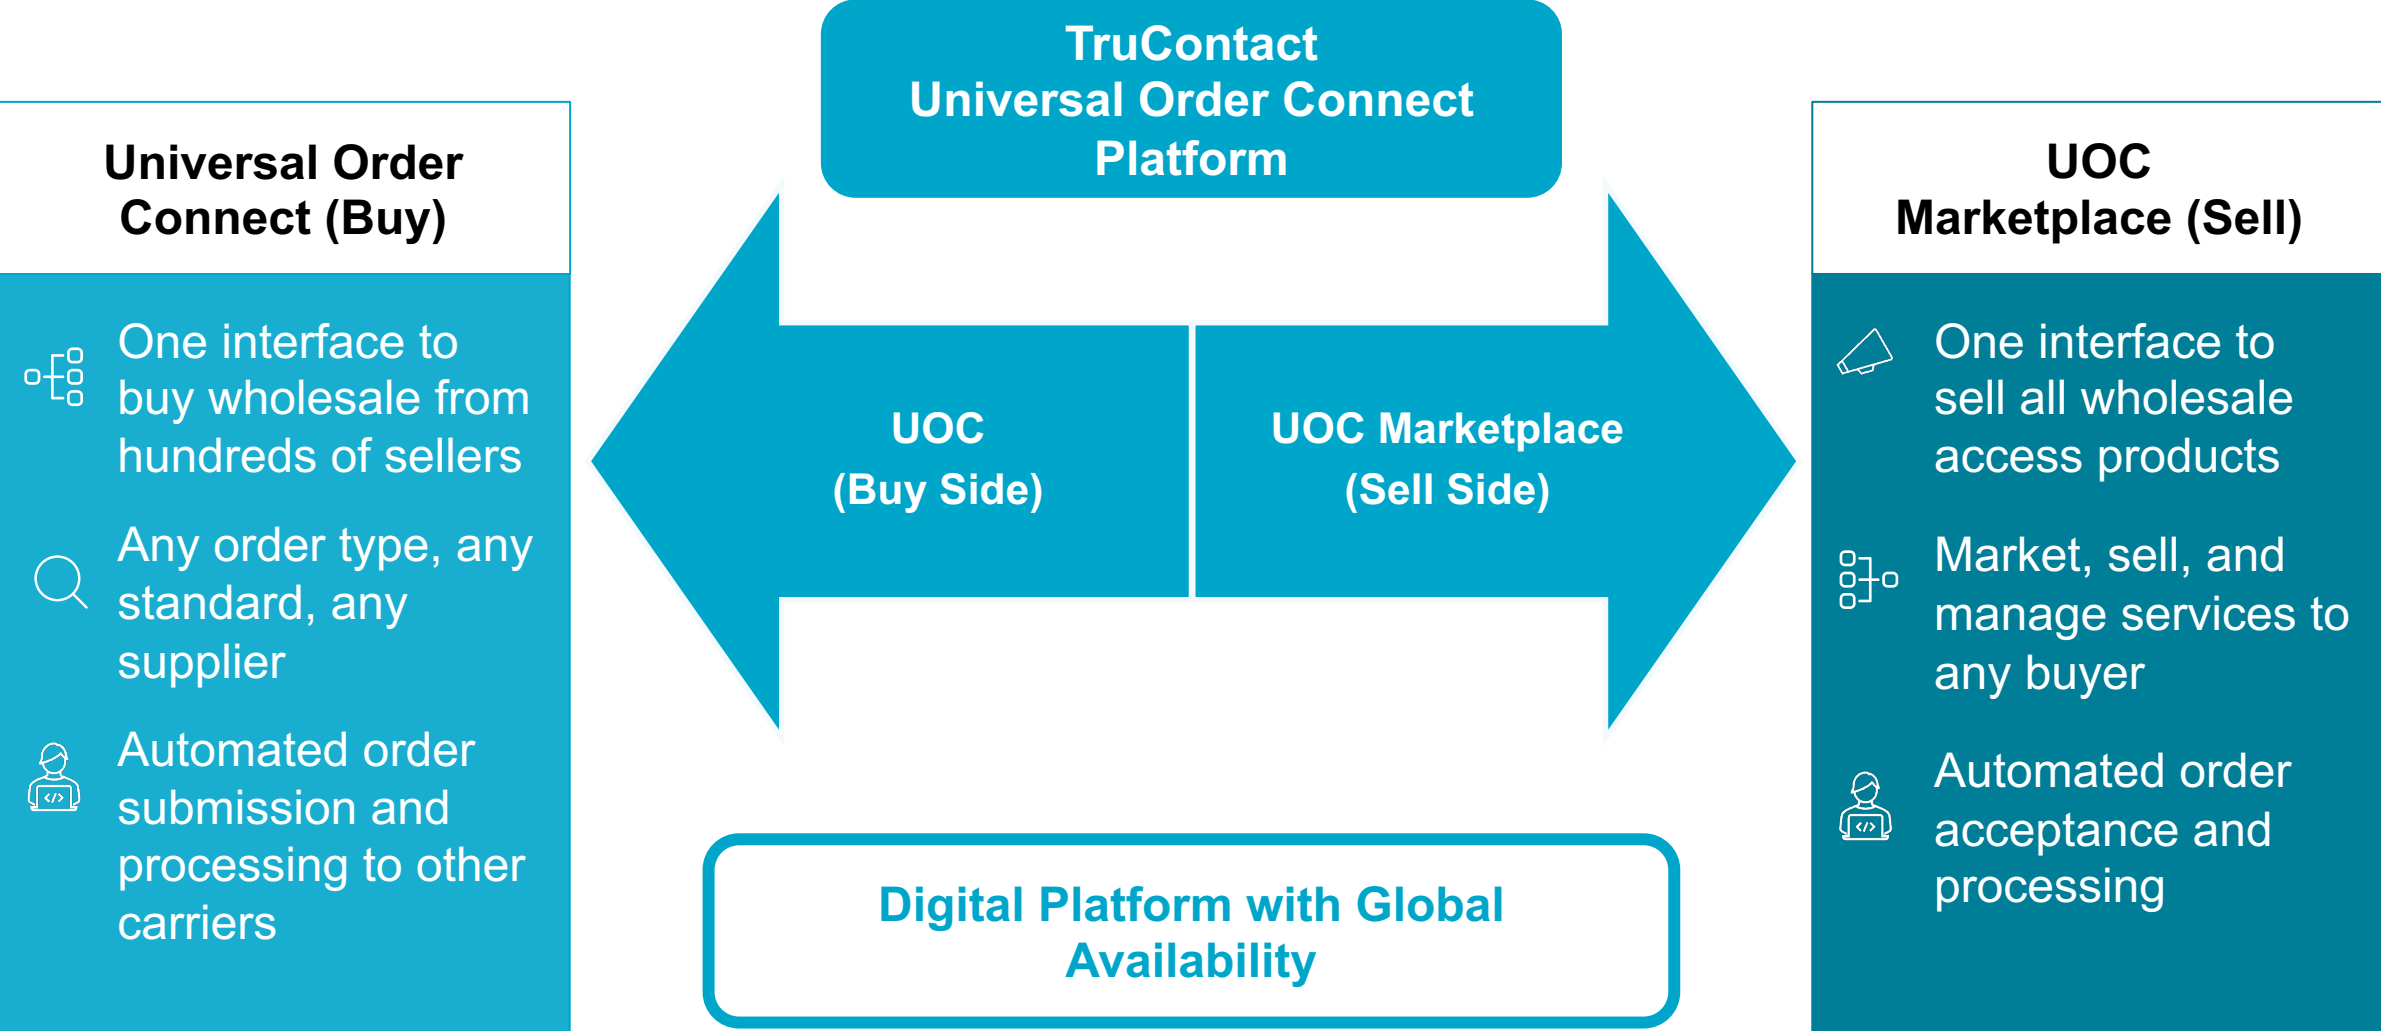

They accelerate customer connectivity to the latest network technologies while meeting rising expectations for the availability of digital, secure communications.

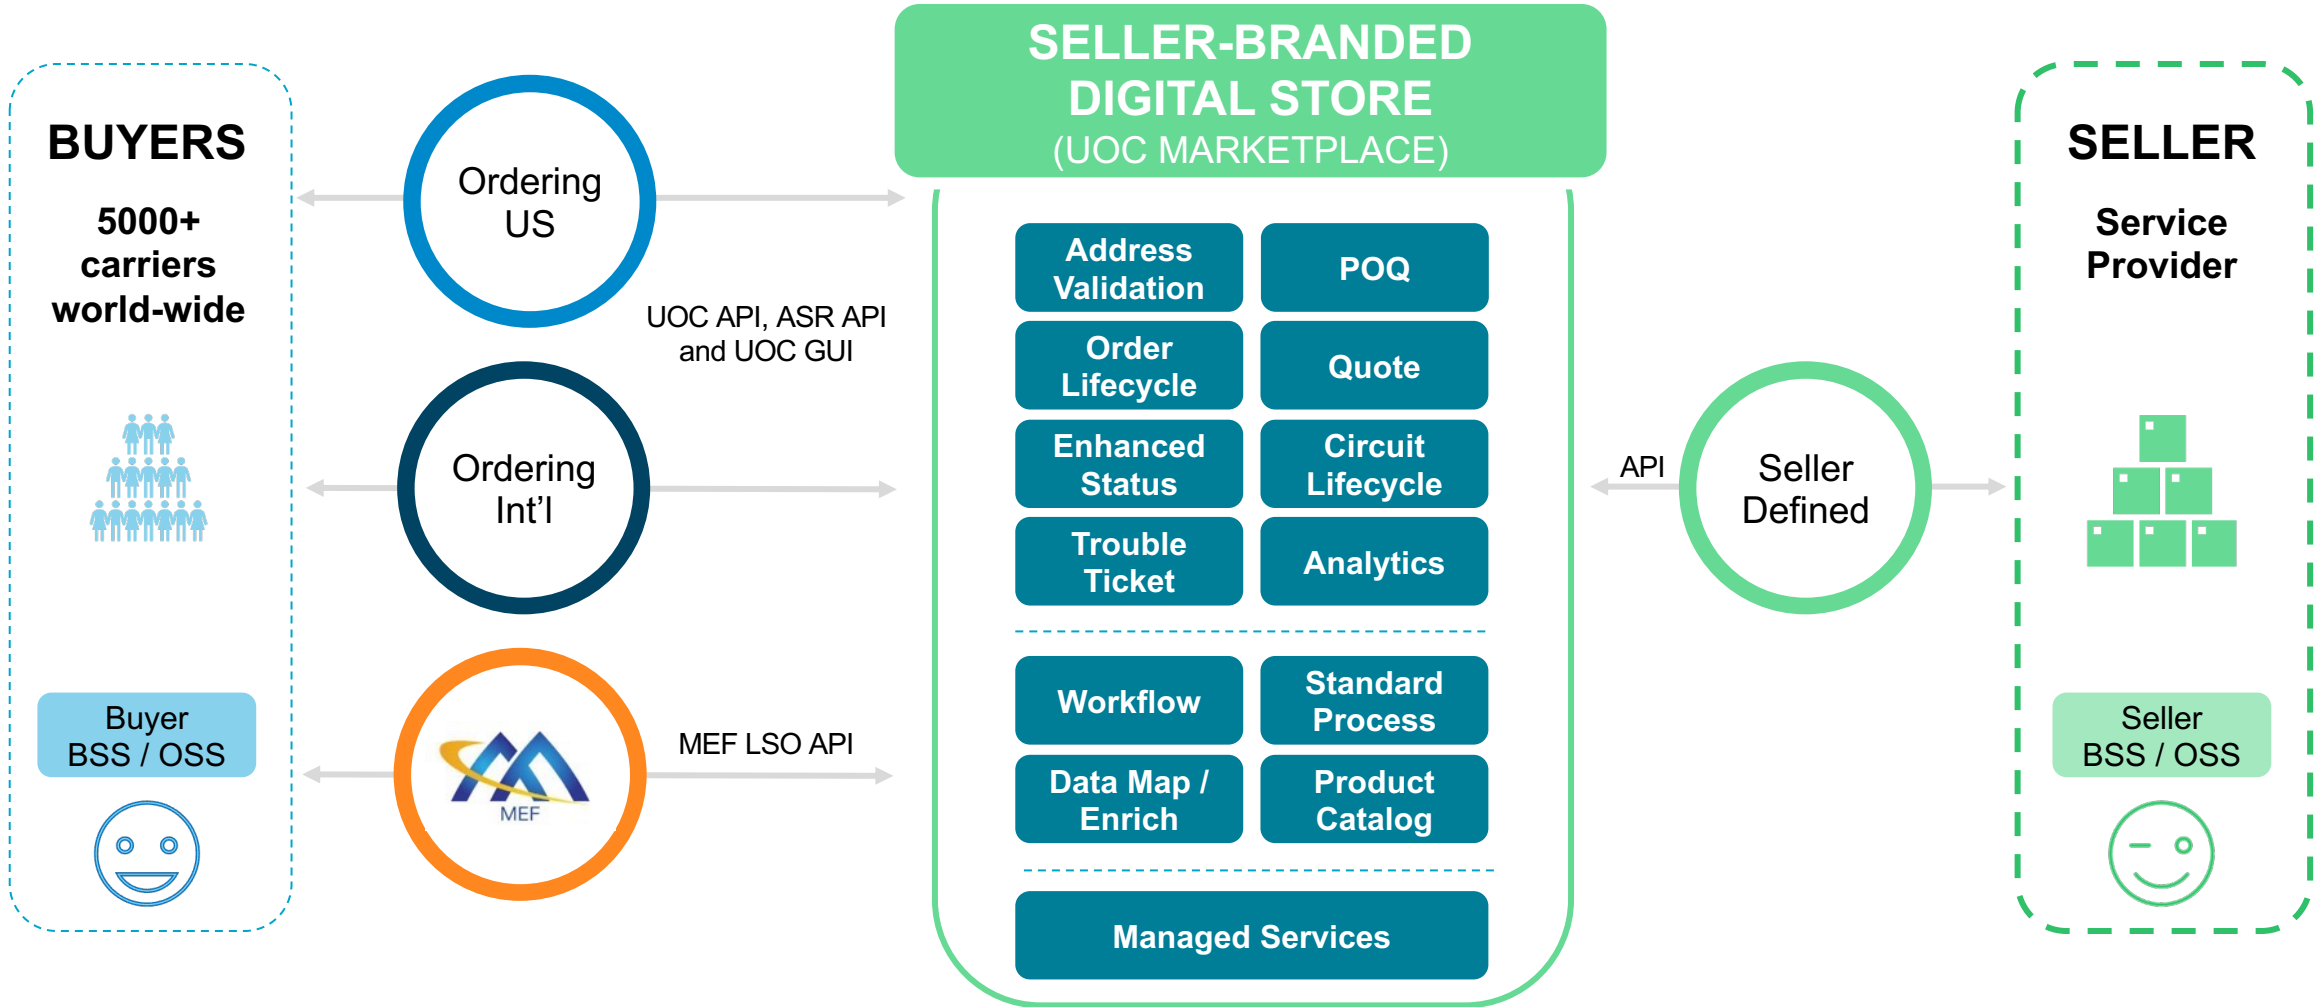

The chaos of wholesale buying and selling of network access

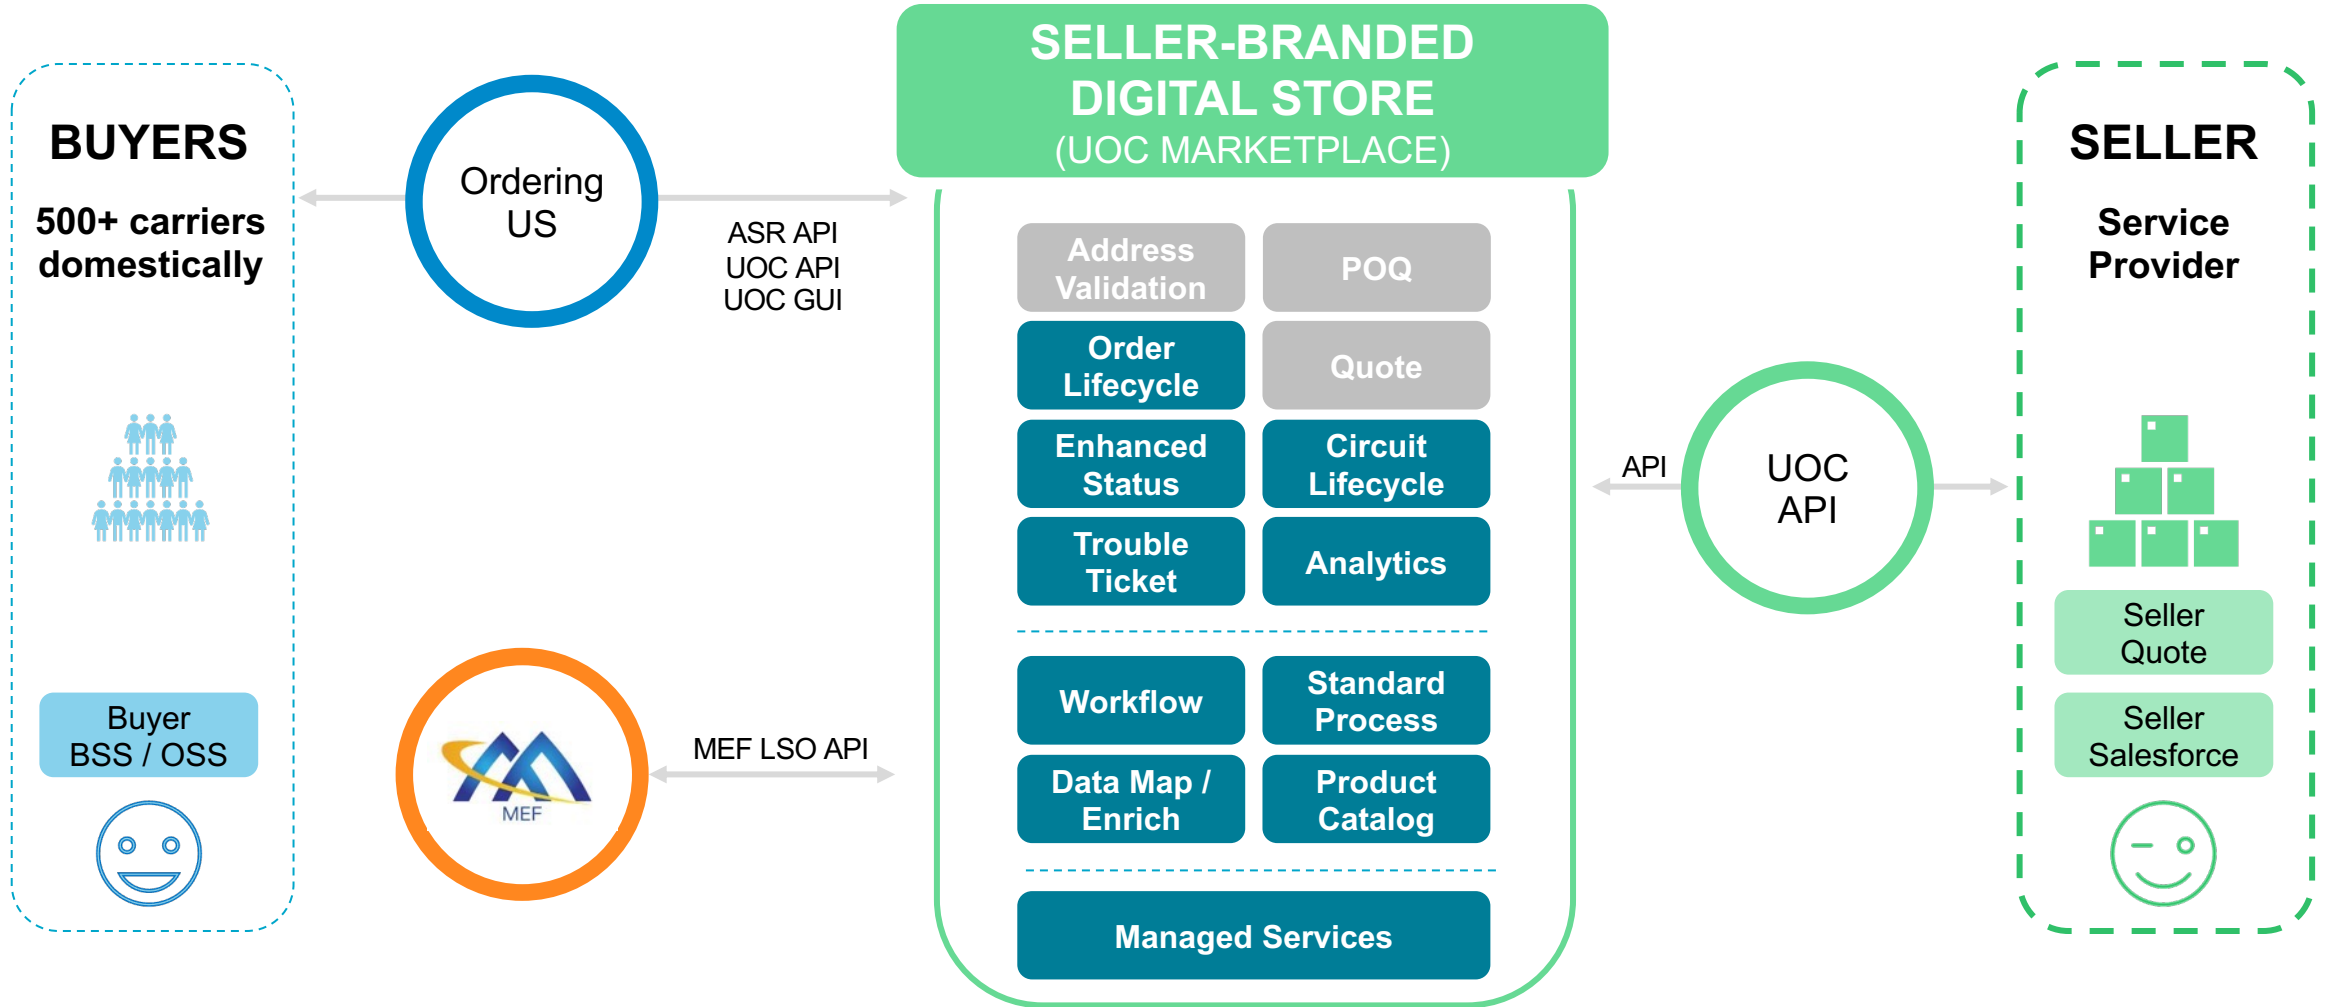

Creating Order(s) from Chaos for wholesale network access

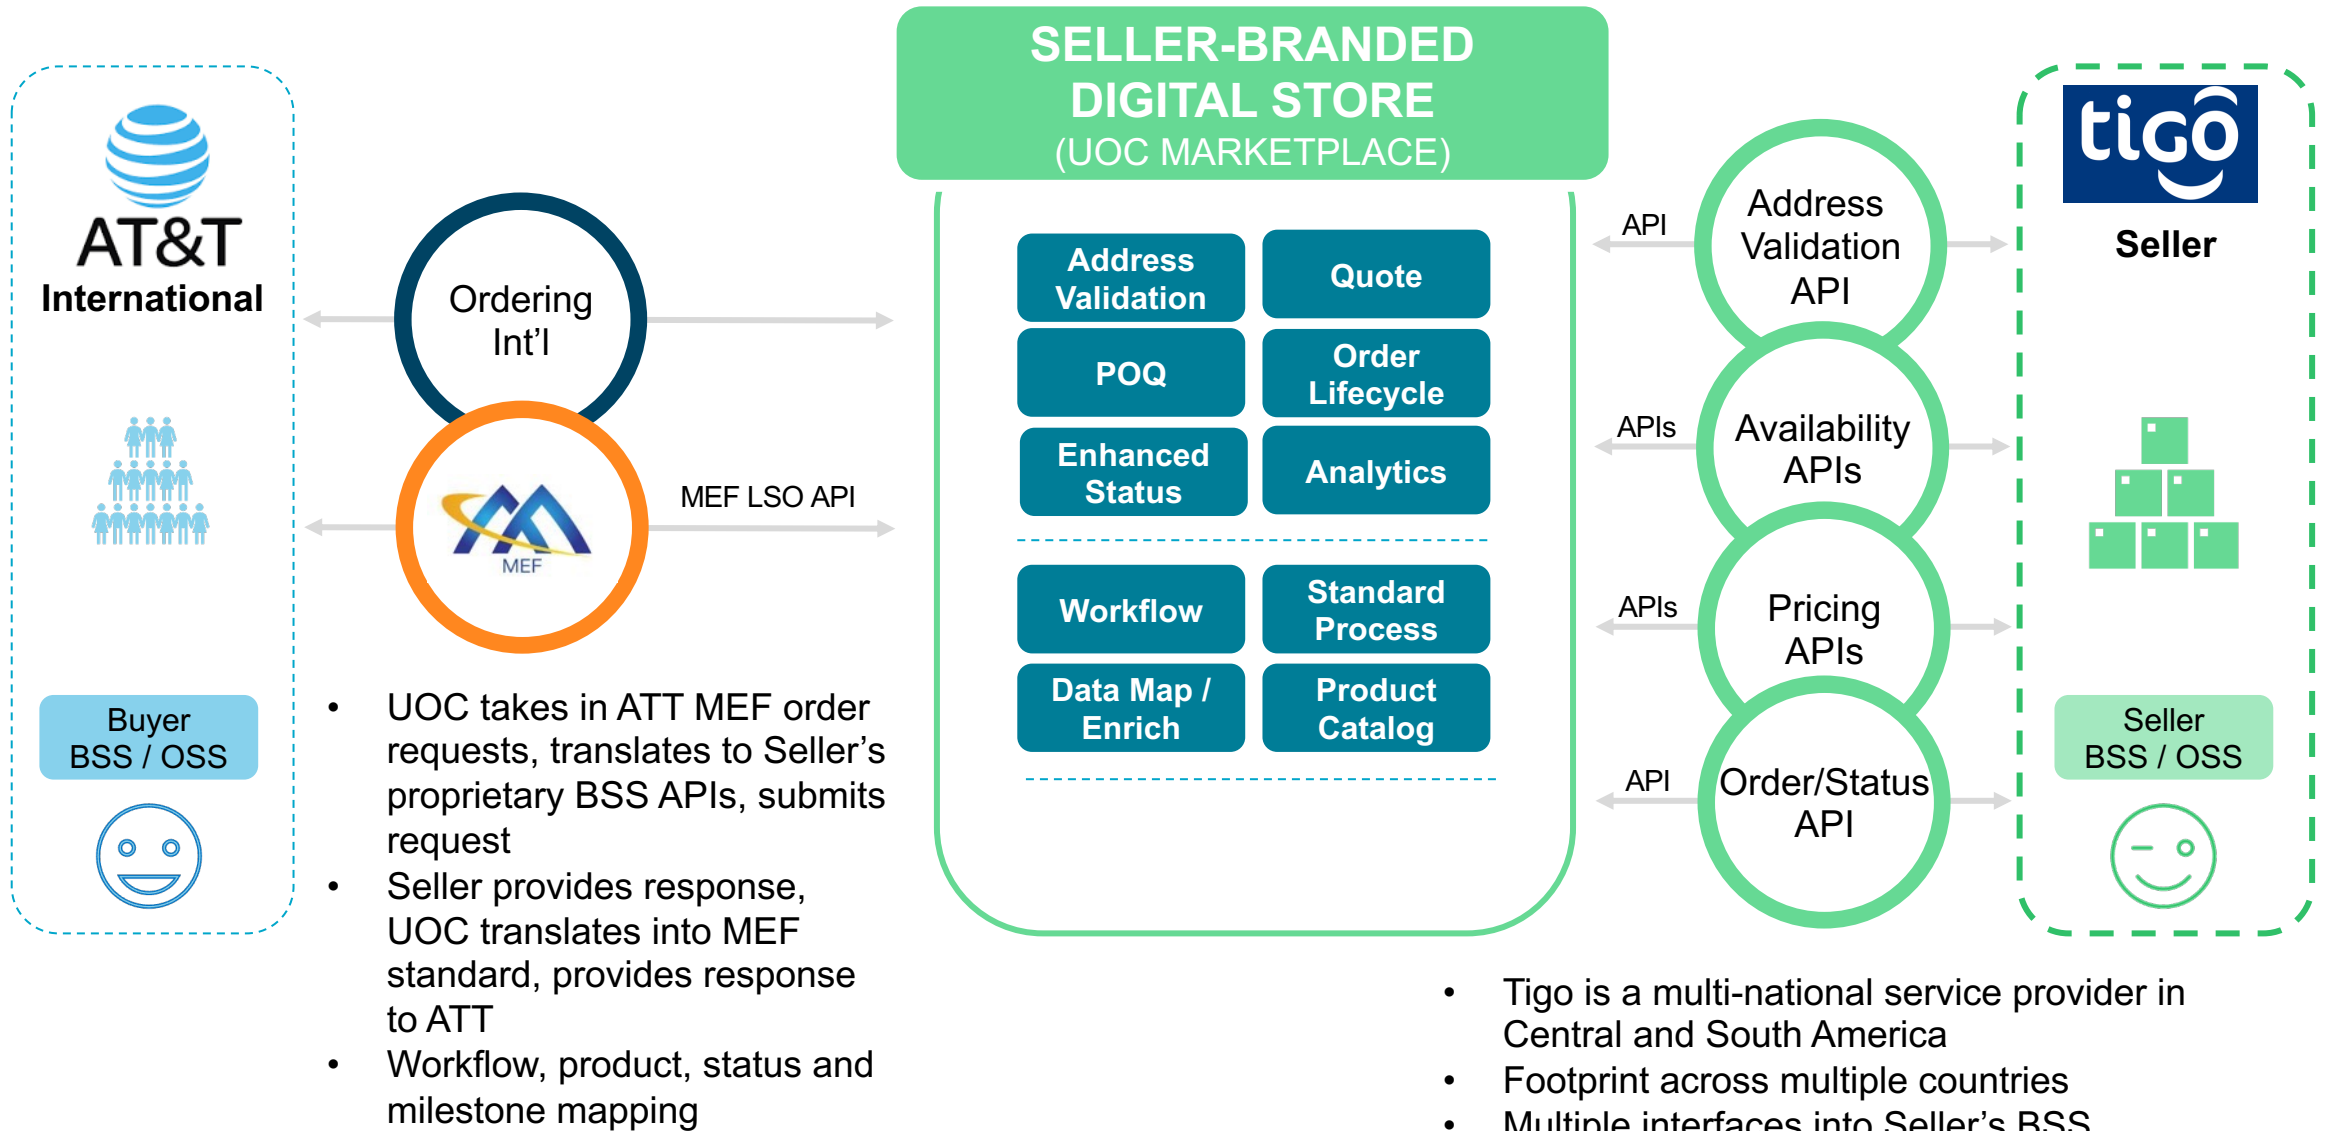

A better customer and operational process – Seller

Typical Domestic UOC-M implementation – Seller

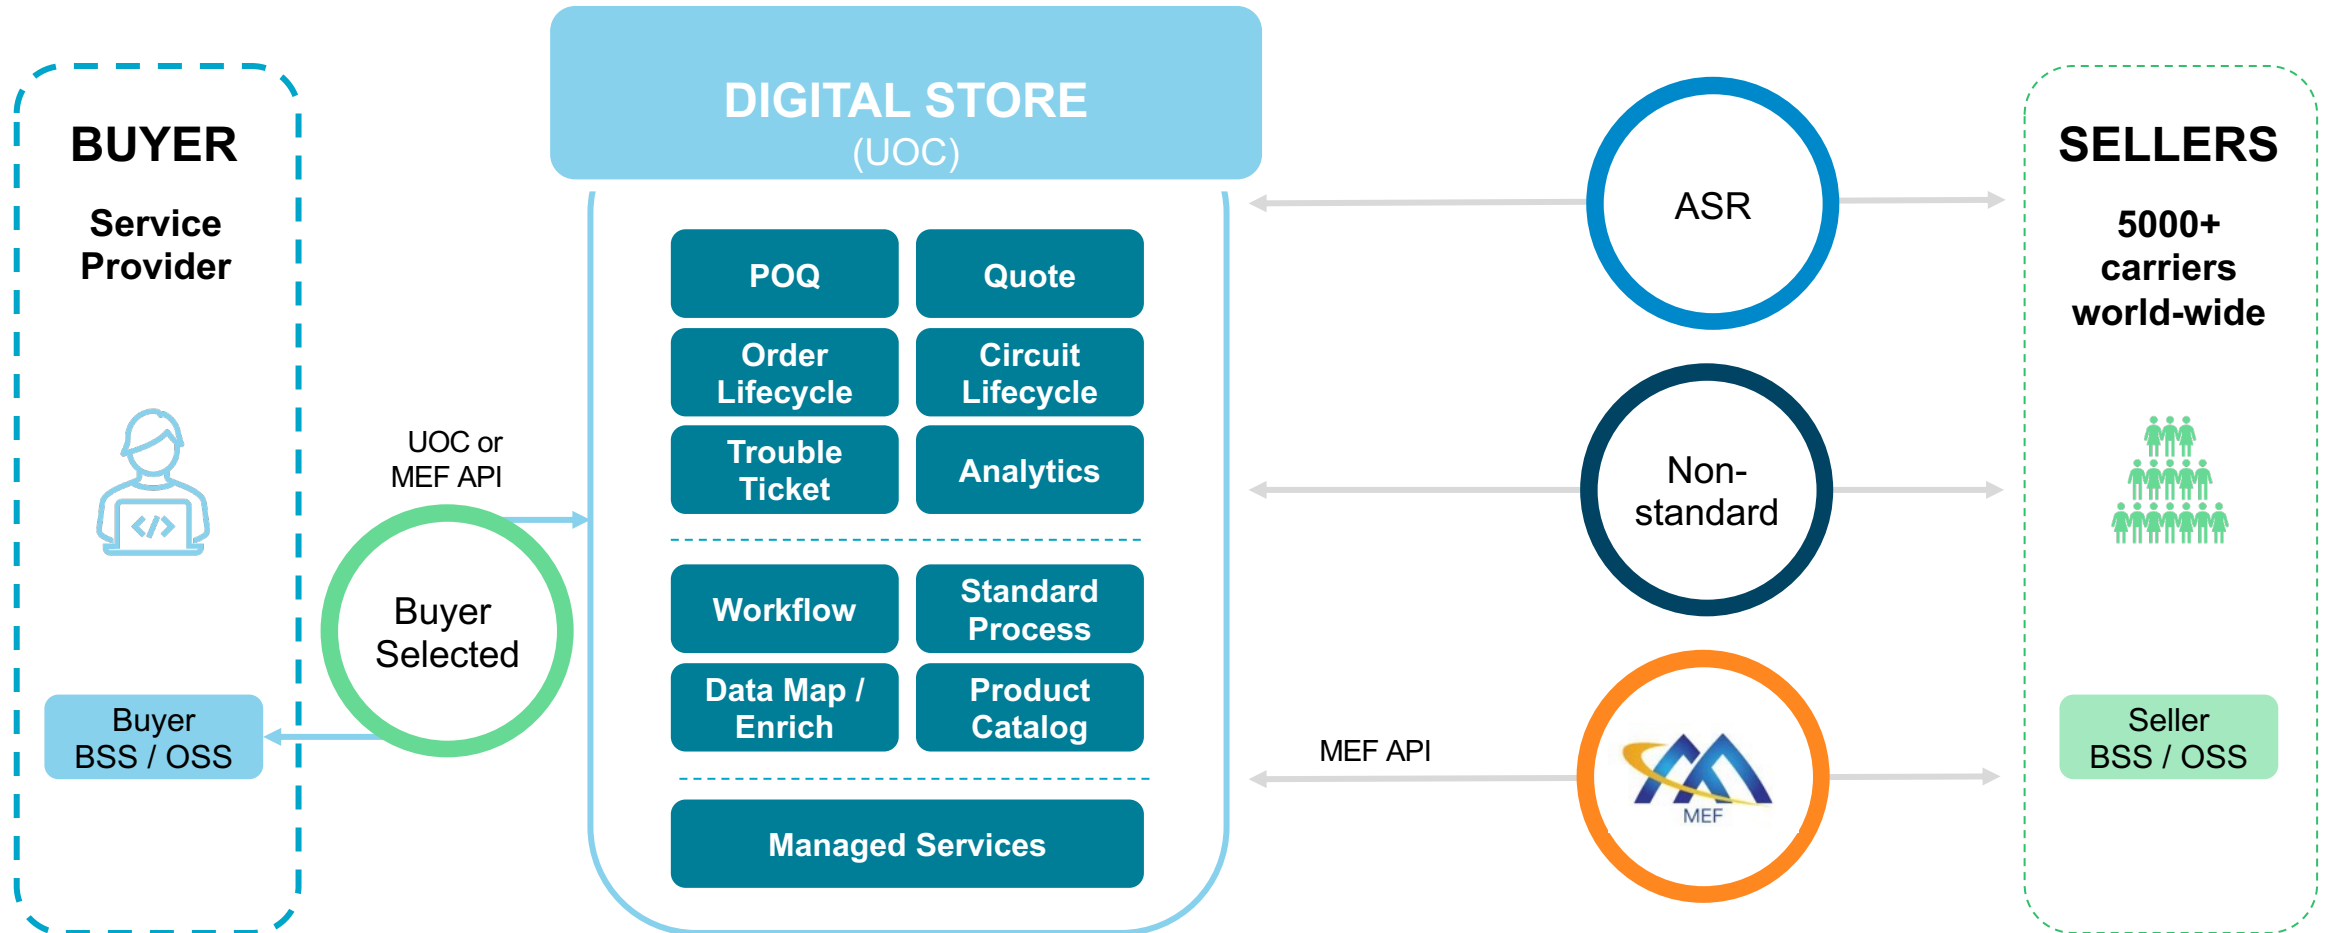

International Seller Implementation Use Case for MEF

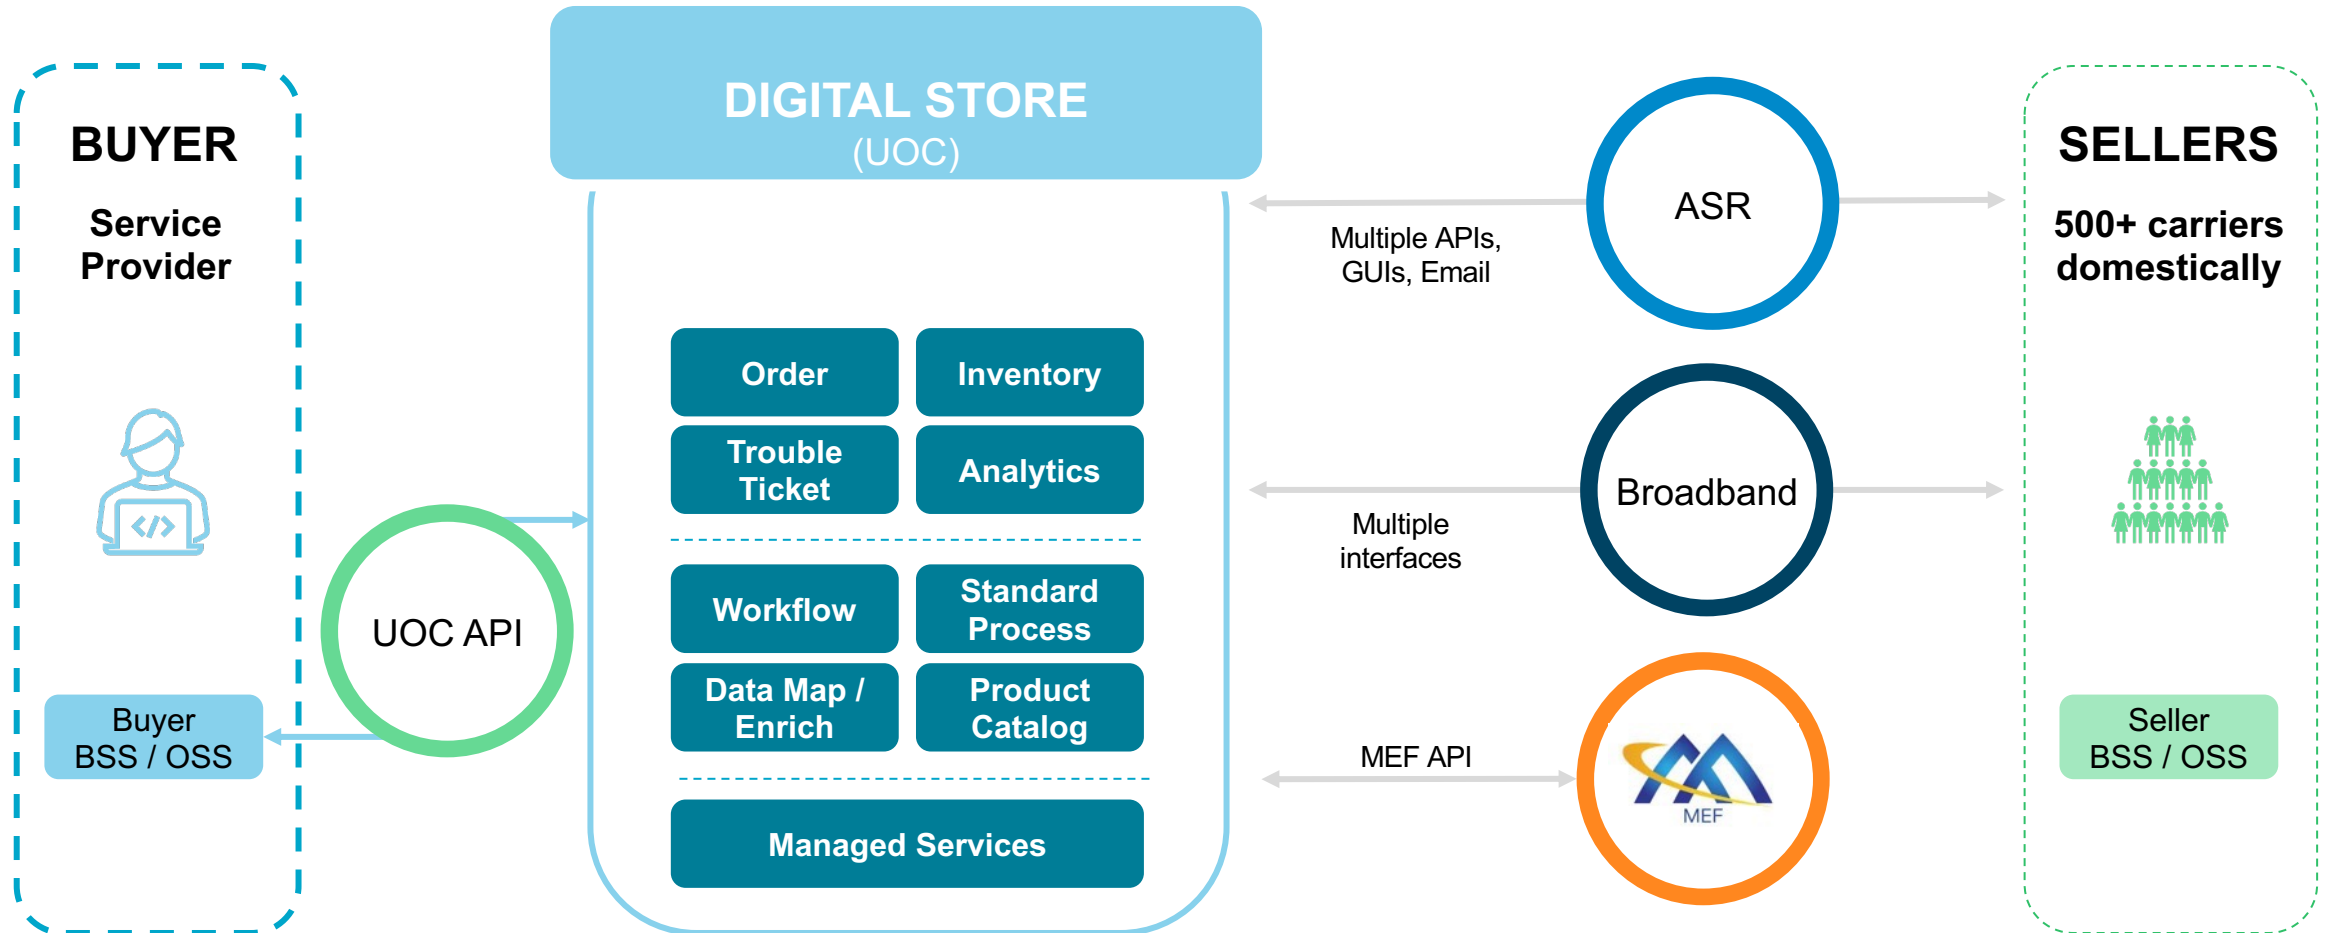

- Tigo is a multi-national service provider in Central and South America
- Footprint across multiple countries
- Multiple interfaces into Seller's BSS
- One UOC solution for all

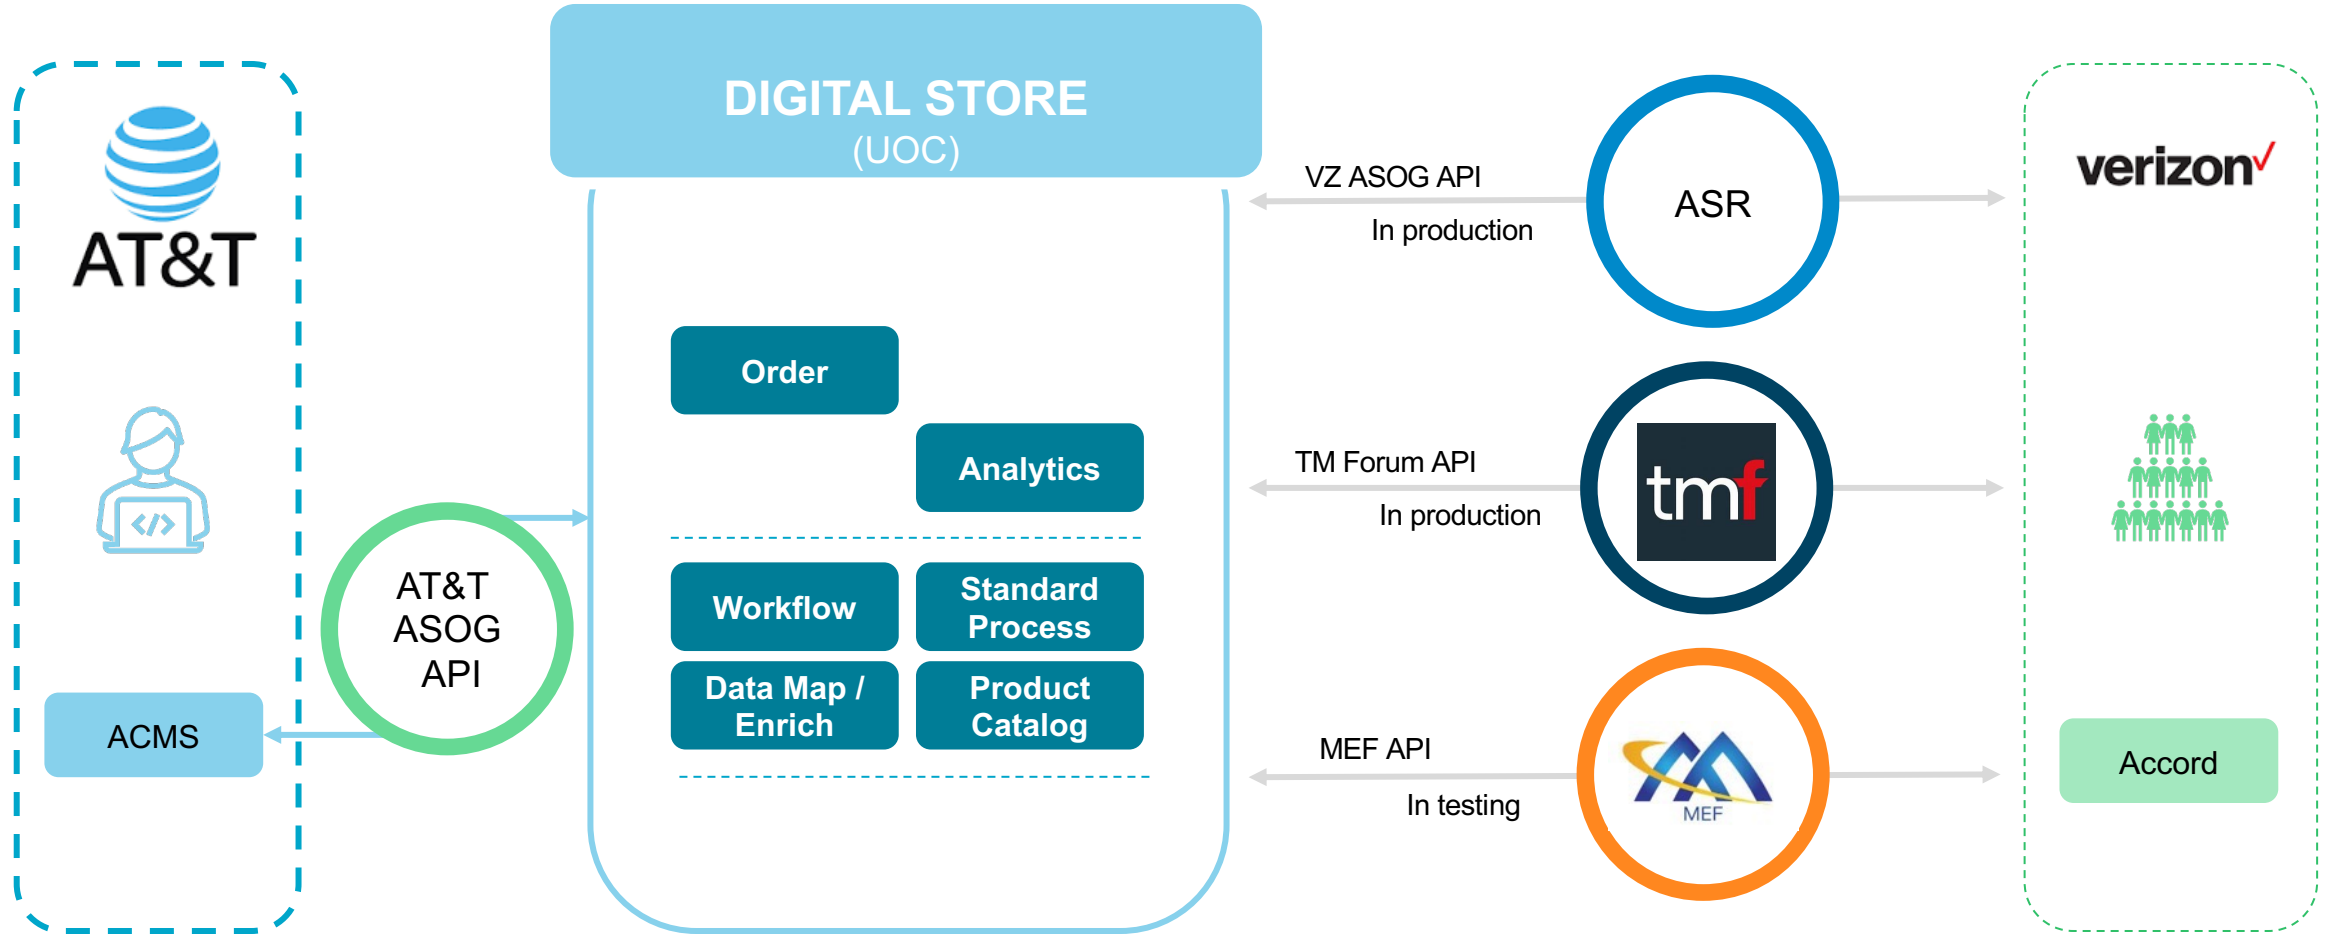

A better way to do business with your suppliers – Buyer

Typical Domestic Implementation – UOC Buy

Domestic UOC Buy MEF Use Case

Underpinned by a modern extensible architecture

- UOC integrates into your existing quote-to-cash systems via open APIs and standard interfaces
- REST API interfaces provide seamless bi-directional integration to:
 - Inventory management systems
 - External data warehouses
 - Downstream reporting systems
 - Business and provisioning systems

Commercial Integrations:

Managed Services for seamless transition and operations

Structured approach improves efficiencies and reduces costs

SAAS ADOPTION CONCERNS

Business disruption

Re-training

Remedy:
Transforming
While
Performing

Outsource

The operation of your network ordering and selling services.

Transition

We take over the current state and transition to UOC.

Manage

End-to-end operation and management by industry experts.

4 Key Takeaways

UOC will help accelerate the adoption of the LSO Sonata APIs

- It might take years for everyone to adopt a single standard across the globe for ordering. In the meantime we have to integrate the new LSO approach into the existing service provider ecosystem.
- We believe that the best answer for the majority of service providers will be to buy an existing and proven platform and integrate it into their ordering operations. Minimizes the build investment time and cost.
- UOC enables CSPs to do business with each other in an automated format regardless of their API or standards implementation.
- Consider outsourcing where needed to enable a seamless transition and to focus employees on other high priority tasks.
